A Journey Through the Seas

The Coloring Book

**Communications and videos travel under the sea
in big cables protected from the waves.**

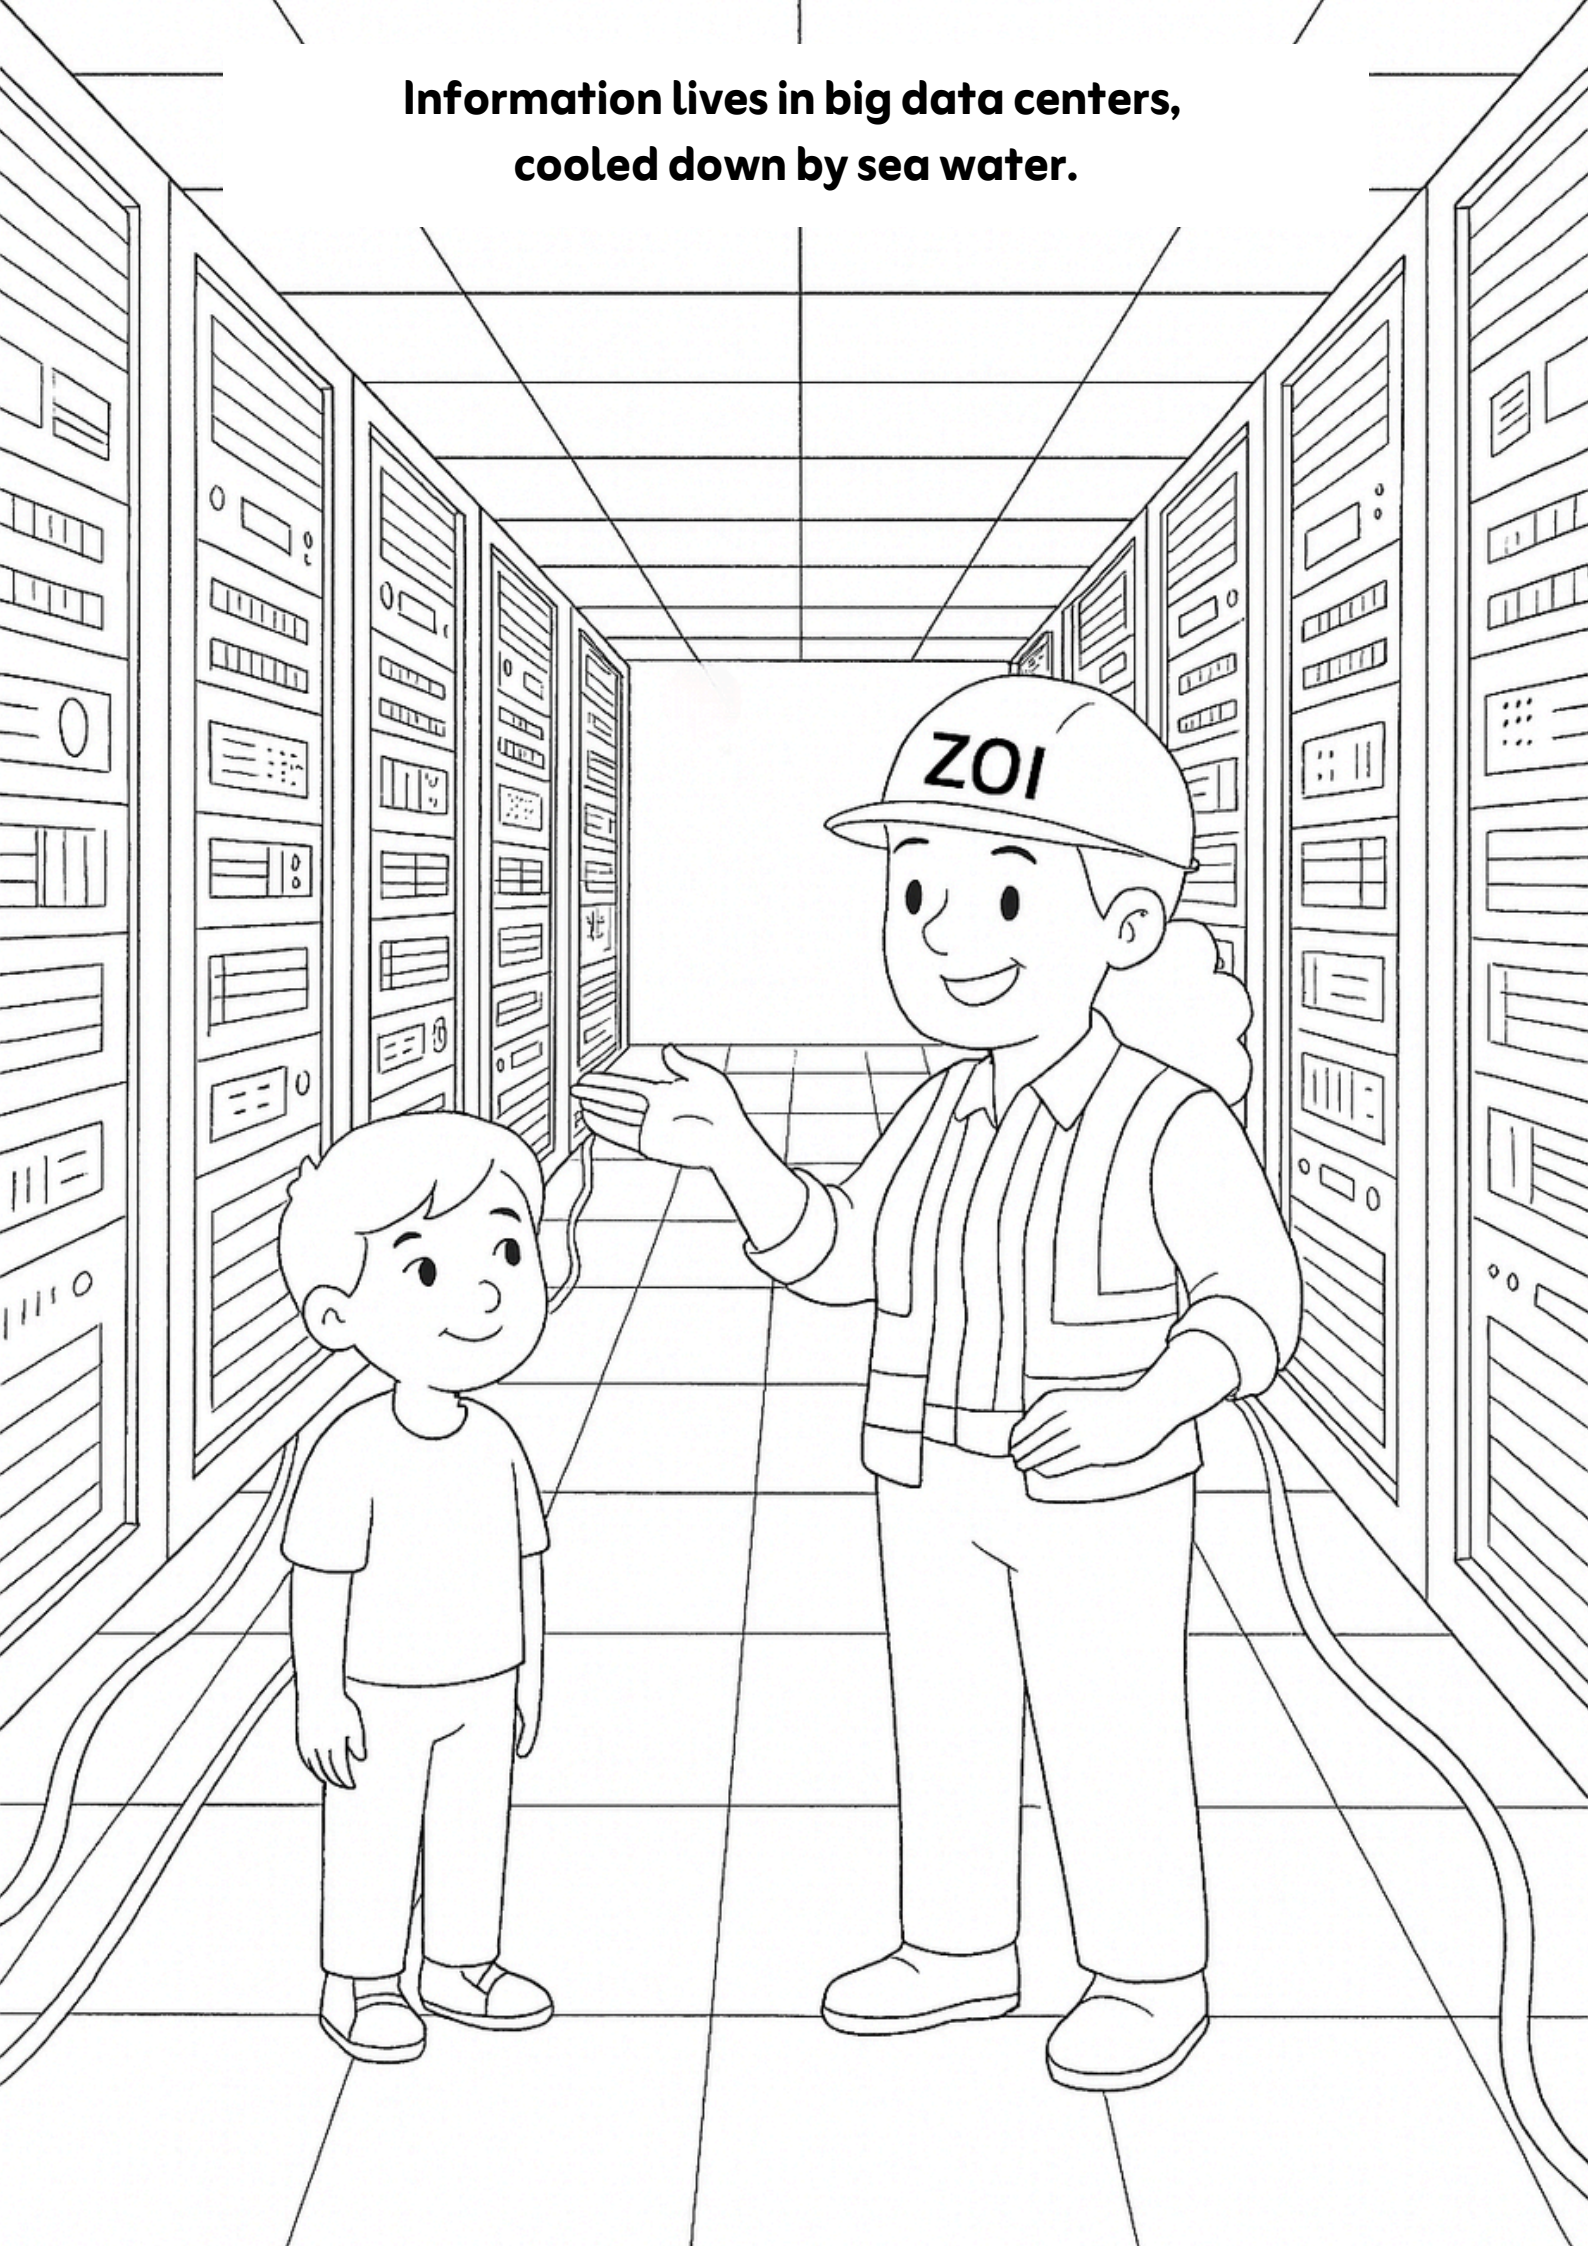

Ships lay these cables on the ocean floor.

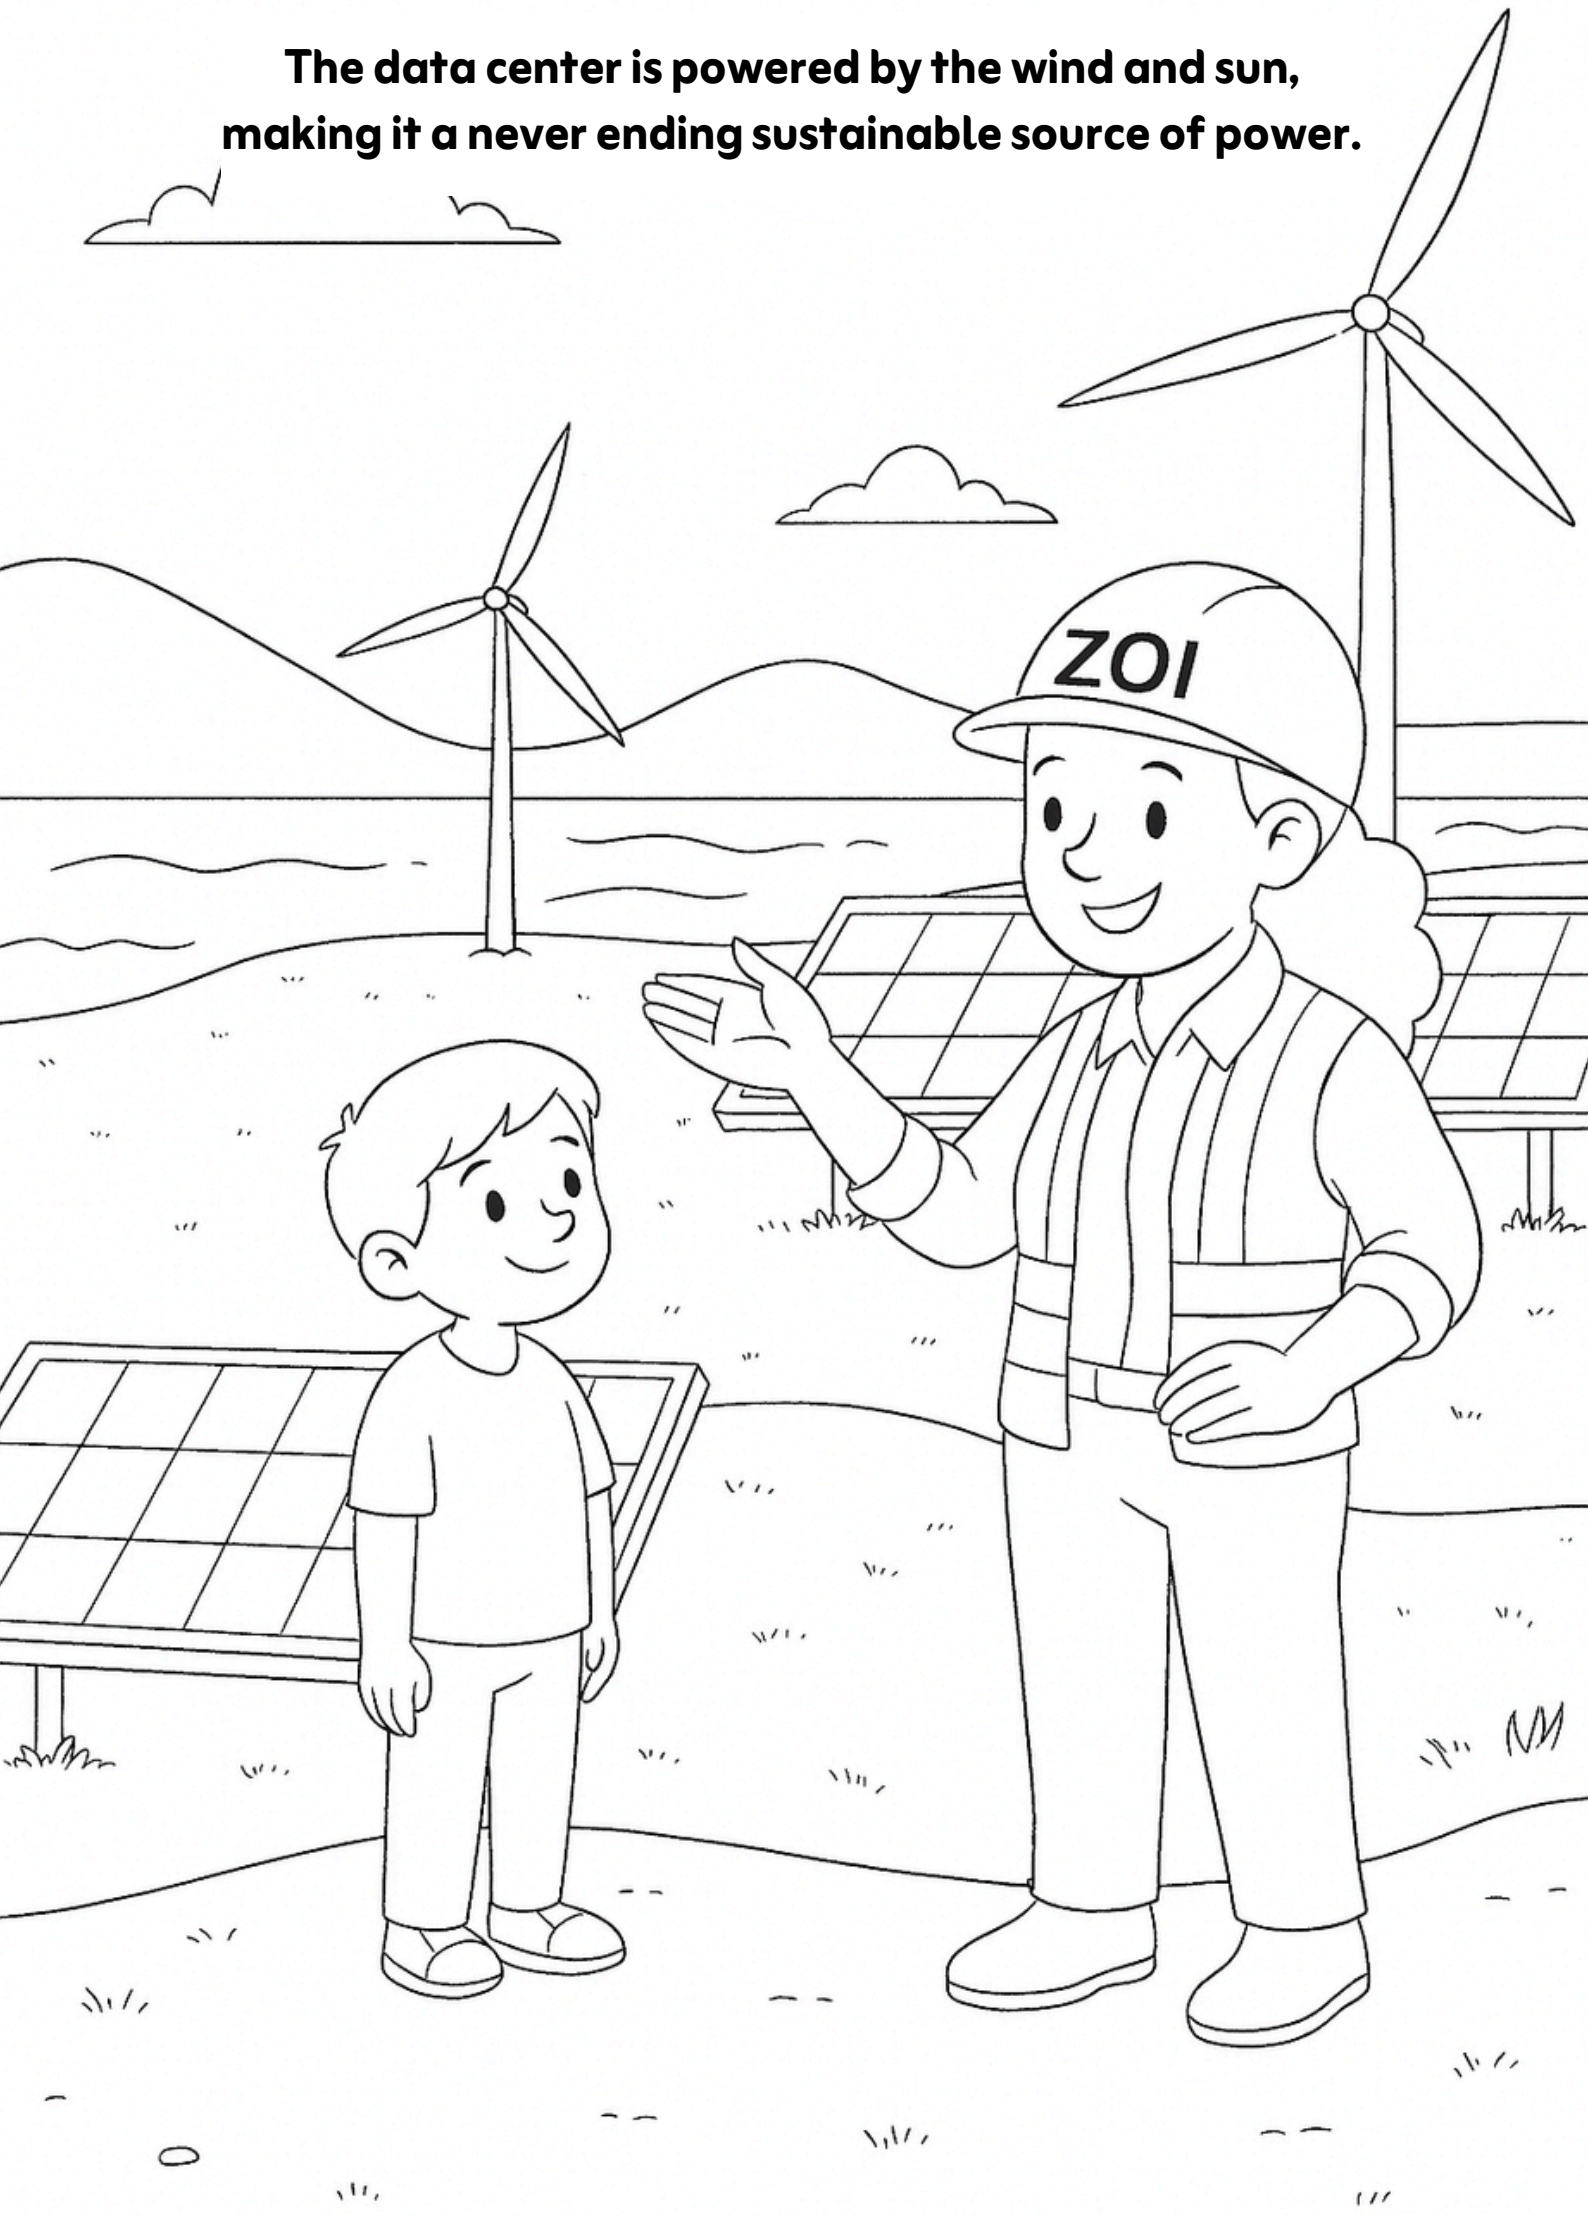

**The cables are safe for sealife,
and buried deep under the sea floor.**

**Information lives in big data centers,
cooled down by sea water.**

**The data center is powered by the wind and sun,
making it a never ending sustainable source of power.**

Fares dreamed of the life below the sea, and how cables delivered his favourite cartoons for him to watch.
